

This file replicates the results from "Trade Induced Technical Change? The Impact of Chinese Imports on innovation, IT and productivity".

by Bloom, Draca and Van Reenen (2015). Created in June 2015.

Any questions please contact: m.draca@warwick.ac.uk

The file contains:

1) Data:

- Nineteen (19) Stata format datasets for different firm, industry and technology measure analyses in the paper.
- Note that an additional stata datasets are created by replication.do in order to store some results for later appending (these files are called mag1.dta, mag2.dta, mag3.dta, mag_text1.dta, mag_text2.dta, mag_text3.dta.
- The data giving the coverage of the textiles quotas by SIC4 industry is contained in "coverage_rates_quotas1.dta" since this has sometimes been requested by researchers for use in their own studies.

2) Do-files:

- Replication.do should replicate the full set of results and figures. Run this in the same directory as the data.
- The files table6_mag.do and tableA6_mag.do are do-files that called in by the main replication.do file.

3) Log and results tables

- A full log-file and output tables are also included (these are all generated by replication.do). Note that the output for the Table A2 descriptive statistics are replicated in the logfile.
